EARMARK DECLARATION

HON. ROBERT J. WITTMAN

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 2009

Mr. WITTMAN. Madam Speaker, pursuant to the Republican Leadership standards on earmarks, I am submitting the following information regarding an earmark I received as part of H.R. 3326, the Department of Defense Appropriations Act, 2010.

Project Name: Aerospace Laser Micro Engineering Station

Amount: \$1,000,000

Requested By: ROBERT J. WITTMAN (VA-01)

Account: Research and Development, Air Force (RDTE, AF)

Intended Recipient of Funds: Jefferson Laboratory, 12000 Jefferson Ave. Newport News, VA 23606

Project description and explanation of the request: In September, 2001, the JLAB, with the Aerospace Corporation, initiated a joint project with the Air Force Research Lab (AFRL) to expand the FEL capabilities to provide a microfabrication processing tool to produce miniature satellite components. Microfabrication of ceramics and glass is a high-potential JLab FEL application. The ability to create intricate microstructures in or on glass materials is considered a necessary value-added component in the development of advanced photonics and certain microinstruments. Microstructure patterns can be used to guide light, serve as frequency selectors, control fluidic flow or enable the extraction of specific cells

to capture genetic material. The Aerospace Corporation is exploring the potential of micro-fabricating a class of glass materials called photocerams using ultraviolet laser processing. This technology promises a more precise, less expensive way of creating intricate glass microstructures with the goal of fabricating picosatellites weighing less than 1 kilogram for the Air Force. The JLab FEL ultraviolet capabilities will allow for the mass production-rate throughput necessary for industry. Because of the compelling need for the Air Force to develop new materials and metal alloys for aerospace applications, the Thomas Jefferson National Accelerator Facility (Jefferson Lab) is requesting \$3 million from the FY10 DOD Appropriations for the final commission and demonstration of the required accuracy and reproducibility for satellite production of the Aerospace Laser Micro Engineering Station (LMES). The LMES will make mass-producible satellites possible using 10 hours with the JLab UV FEL as compared to 270 hours using a conventional UV laser, making it possible to address new and unique missions not accessible using conventional satellite technology. I certify that neither I nor my spouse has any financial interest in this project.
